- Sparkling soft drinks and non-carbonated soft drinks only. Does not include water or juice.
- Total CCEP sales. Does not include coffee, alcohol, beer or freestyle. Low calorie beverages ≤20kcal/100ml. Zero calorie beverages <4kcal/100ml.
- Based upon 2019 CCEP sparkling soft drinks sales volume, at an SKU level.
- Packaging is the packaging in the hand of the consumer (RTD packaging). Recyclability criteria based upon market specific recyclability assessments.
- Represents an aggregated number, based on packaging collection rates by material in each of our markets which is then applied to our own packaging volumes. The way that packaging collection rates are calculated may differ across our markets and

- therefore this aggregated number should be treated as an estimate.
- Water use ratio, litres of water per litre of finished product produced.
- Water replenishment calculated on production volume from CCEP sites based in areas of water stress as determined by WRI/Aqueduct analysis, and total water volumes replenished. May differ to The Coca-Cola Company calculations, which are based on total sales volumes.
- Absolute carbon reduction target, irrespective of business growth. Core business operations includes manufacturing, cold drink equipment and transportation.
- Energy use ratio, MJ/litre of product produced.

Note on sources of data and calculation methodologies under the WRI/WBCSD Greenhouse Gas (GHG) Protocol, we measure our emissions in three 'Scopes', except for CO₂e emissions from biologically sequestered carbon, which is reported separately. Please note that prior years data may be restated due to more accurate data becoming available. Data is consolidated from a number of sources across our business and is analysed centrally. We use a variety of methodologies to gather our emissions data and measure each part of our operational carbon footprint, including natural gas and purchased electricity data, refrigerant gas losses, CO₂ fugitive gas losses and transport fuel, water supply, wastewater and waste management.

We use emission factors relevant to the source data including UK Department for Business, Environment and Industrial Strategy (BEIS) 2019 and IEA 2017 emission factors. Scope 1 figures include: direct sources of emissions such as the fuel we use for manufacturing and our own vehicles plus our process and fugitive emissions. Scope 2 figures include indirect sources of emissions such as the purchased electricity we use at our sites. We report against this on both a location based and a market based approach. Scope 3 figures include the emissions associated with the packaging we put on the market and the ingredients we use in our products. It also includes indirect sources associated with the electricity used by our cold drink and coffee equipment at our customers' premises, our employee business travel by rail and air, emissions related to the supply of water and treatment of wastewater, emissions from the treatment of waste, fuel used by our third party distributors, and other energy related emissions not already accounted for under Scope 1 and 2 (for example, emissions from well to tank and transmission and distribution). Additional Scope 3 figures from the WRI/ WBCSD GHG Protocol will be included in our 2020 CDP response.

- (1) Under the WRI/WBCSD Greenhouse Gas (GHG) Protocol, we measure our emissions in three 'Scopes', except CO₂e from biologically sequestered carbon, which is reported separately. In 2019, CCEP's biologically sequestered carbon was 9,931 tonnes.
- (2) Please note we do not have PFCs or SF₆ emissions.
- (3) Includes on- and off-site solar, geothermal, biomass, and combined heat and power (CHP) generation.
- (4) Market based approach only.
- (5) Calculated using the Scope 2 market based approach.
- (6) Please note that previous years data has been restated due to more accurate data becoming available.
