

# ACTION ON CLIMATE

## **Blowing pressure reduction**

(Germany)

In the majority of our manufacturing sites, PET pre-forms are delivered and then blown on site in order to create our PET bottles. This requires energy and we have been working hard to try to reduce the amount of pressure required to produce our PET bottles. In 2018, we held a number of trials to address this including reducing the overall bar pressure at our site in Dorsten. We also introduced new low pressure base molds and as a result three of our manufacturing sites in Germany saved 897,000 kWh per year.
