

# ACTION ON CLIMATE

## **iCool** (Iberia)

In January 2018, we started a process of buying new iCool low charge cold drinks equipment, which reduced energy consumption by an average of 12% compared to equipment used in 2017. In addition, 500 high capacity Open Front Units were withdrawn from the market and replaced with new, low energy consumption equipment. As a result, CCEP in Iberia grew their CDE fleet by 3.6% but reduced the overall energy consumption by 3.1%. This process was also implemented in Germany with similar, positive results.
